

NET LIX

Steps to analyze to solve the problem

1. Define : to recommend a movie to the user of the Netflix based on the previous data.
2. Collect the data: need to collect the raw data of the user
3. Clean the data: clean the unwanted data
4. Visualize the data: the data should visualize

Business understanding:

- How to suggest a good movie.
- What type of content that person usually watch.
- focus on the language, duration and ratings of previously watched

Data collection

Collect all the data of user everything his searches, watch time, languages, types.

Data cleaning : clean the unwanted data like less watch time less ratings user gave and languages he didn't prefer.

This is the raw data of the use watch history.

The screenshot shows a web interface titled "Your Queue". At the top, there are two tabs: "DVD (129)" and "Instant (64)". To the right of the tabs, there is a link "Questions? Visit our FAQ section" and a link "Show all DVD and Instant titles". Below the tabs, there is a section titled "Recently Watched:" which is currently empty. Below that, there is a table titled "Instant Queue (44)" with a button "Update Instant Queue" on the right. The table has columns: "List Order", "Movie Title", "Instant", "Star Rating", "Genre", and "Notes". The table contains six rows of data:

List Order	Movie Title	Instant	Star Rating	Genre	Notes
1	Stargate SG-1	Play	★★★★★	TV Shows	
2	Robin Hood	Play	★★★★☆	TV Shows	
3	The IT Crowd	Play	★★★★☆	TV Shows	
4	The Office (U.S.)	Play	★★★★☆	TV Shows	
5	The Secret of Kells	Play	★★★★☆	Children & Family Movies	
6	Dollhouse	Play	★★★★☆	TV Shows	

Extracting insights

find the top 5 ratings and analyse what types of movies those , get top ratings, what he rewatched the movies.

Visualize the data :

The data should be clearly for understanding .

🕒 TOTAL WATCHTIME

860 hrs

which is about 36 days

🍿 TOP GENRES

Drama, Action, Sci-Fi, Fantasy

from 32 shows

Communicate results

Suggest the 2to 3 movies with high match percentage and short summary

- **Choose the right models**
 - **Use the simple logic or ML model to**
 - **Predict the user's preference.**
-
- **In Netflix we can use this ml models**
 - **Svd**
 - **knn**

Monitoring the outcome

Track it if the recommendation was watched, liked or skipped. if model worked continue it or update it.

These are above steps involve to solve the problem
