

Description for the dataset tht provided:

How was the data set before changes :

- The data set has 7 columns where these columns tells about the hiring of the company .
- Says about the employees salaries
- And abouth the status,interview taken
- Where in the columns event_name and post_name the some rows are missing.
- And they are different types of depatments

Data set after the cleaning the data:

- The 15 empty rows in the event_name are cleared them for male and female analyze
- Used the different formulas for different tasks.
- Mainly answered the questions by excel only.

Data Analytics Tasks:

A. Hiring Analysis:

Determine the gender distribution of hires. How many males and females have been hired by the company?.

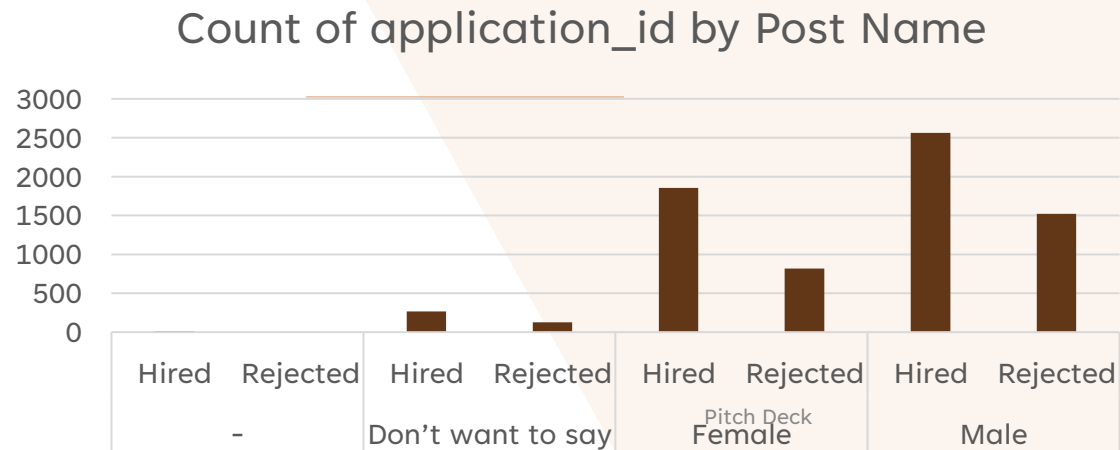

- Total 1856 females hired by the company
- Total 2563 males hired by the company

Insights:

- Total 268 don't want say hired

Approach:

- I have used the graph blw application id ,statues,event_name
- For essay understanding

B. Salary Analysis:

The average salary is calculated by adding up the salaries of a group of employees and then dividing the total by the number of employees.

- To calculate we used the formula =Average (num1,num2-----num n)
- We got the AVERAGE(G5:G7160)= 49933.03
- To fix the outliers i need to get max value for that I used the max() where I got 400000
- To fix the outliers i need to get min value for that I used the min() where I got 100
- So for the outliers I chaged because they have huge differences form average

C. Salary Distribution:

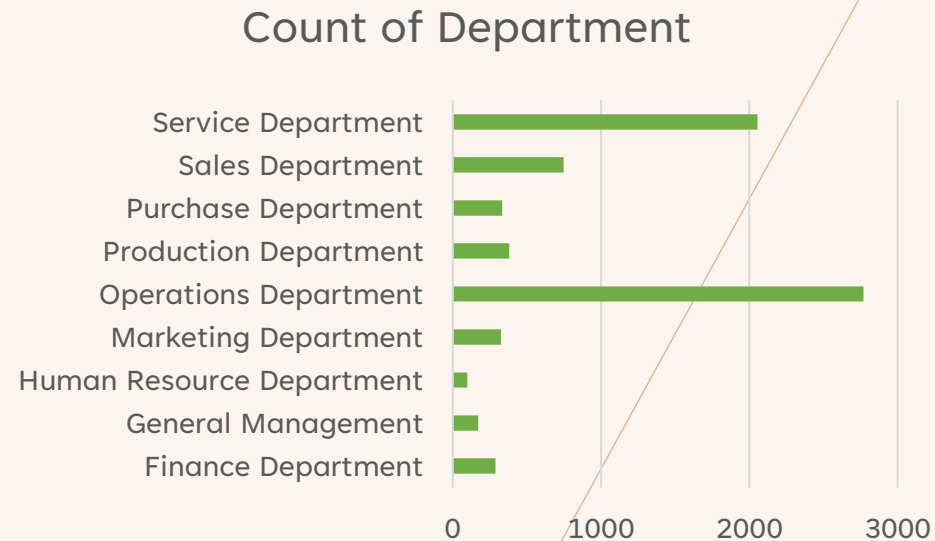

Create class intervals for the salaries in the company. This will help you understand the salary distribution.

- To create intervals for salaries in the company I calculated the max,min of offered salaries .
- After I created width of class interval by formula of $(\text{max}-\text{min})/9$

Row Labels	Count of Offered Salary
1-99	
100-20099	1414
20100-40099	1424
40100-60099	1530
60100-80099	1431
80100-100099	1365
180100-200099	1
280100-300099	1
380100-400099	1
Grand Total	7167

D. Departmental Analysis: Visualizing data through charts and plots is a crucial part of data analysis. Use a pie chart, bar graph, or any other suitable visualization to show the proportion of people working in different departments.

Department	Count of Department
Finance Department	288
General Management	172
Human Resource Department	97
Marketing Department	325
Operations Department	2771
Production Department	380
Purchase Department	333
Sales Department	747
Service Department	2055

Insights:

- The more people are working in the department of operations
- The less members are working in the human resource department

A chart or graph to represent the different position tiers within the company. This will help you understand the distribution of positions across different tiers.

Approch:

- I used the statistics funcations and graph to anwers the given tasks
- The formula I used are here in the link
- https://docs.google.com/spreadsheets/d/1ciO4yF-YclS-UpCGfOd0jPj9AygKHa_e/edit?usp=sharing&ouid=114401290432215454951&rtpof=true&sd=true

Tech stack used

- I used the excel(2023)
- Because of its latest features
- For making report I used the PowerPoint presentation

Insights

- The 4lakh salary unknown gender and that got rejected
- The less salary is 100
